#### **DETAILED ACTION**

## Response to Amendment

The Applicant amended independent claims 1 and 9 and newly added claims 19 and 20. All pending claims 1-20 were examined in this non-final office action. necessitated by new grounds of rejection based on Applicant's persuasive arguments.

### Response to Arguments

Applicant's arguments with respect to claims 1-20 have been considered but are most in view of the new ground(s) of rejection.

## Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

- (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- Claims 1, 2, 5, 6, 8, and 19 are rejected under 35 USC 103(a) as being unpatentable over Chernow (US 4,999,806) in view of Official Notice (regarding old and well-known in the arts, hereinafter referred to as ON1).

Application/Control Number: 09/988,672 Page 3

Art Unit: 3625

Chernow teaches a telephone ordering system whereby a user can order via the telephone downloadable software. The system implements a call back feature that delivers the order software upon successful reconnection with the user and the user providing a temporary password. Chernow further teaches:

- receiving a temporary password and purchasing conditions from a user
   through telephone connection: (see below)
- retrieving article information meeting the purchasing conditions received in step (a), after ending the telephone connection: software product to be purchased in retrieved after ending the call (see at least Fig. 1A (g); Fig. 1B (j, k, l).
- setting telephone connection to the user using the user's originator
   telephone number and confirming the user using the temporary password
   received in step (a): system calls the user back (see at least Fig. 1B).
- providing the article information retrieved in step (b) and arranging a
   transaction according to the user selection: delivers the ordered product (see at least Fig. 1B).

Chernow teaches all the above as noted under the 103(a) rejection and teaches a user a) calling an ordering service, b) submitting purchase order information and credit card number to the service (i.e. a number uniquely associated with the user and submitted for one-time use), and c) generating an acceptance key by the system that is transmitted to the user as a temporary password (i.e. one-time code) (see Fig. 1A (e, f)). Chernow, however, does not

disclose receiving a temporary password from the user. The Examiner takes the position that it is old and well-known in the arts for users of computer or telephonic technology to create their own password, personal identification number (PIN), or purchase order numbers for later use by the user and the system to verify the user's identity. Therefore it would have been obvious to one of ordinary skill in the art at time of the invention to modify the system and method of Chernow to receive a temporary password from the user as taught by ON1. The invention of Chernow generates the temporary password (i.e. acceptance key) however the user could have as easily been queried to provide a temporary password of PIN without destroying the cited reference.

2. Claim 3 is rejected under 35 USC 103(a) as being unpatentable over Chernow (US 4,999,806) and ON1 (regarding old and well-known in the arts), further in view of Official Notice (regarding old and well-known in the arts hereinafter referred to as ON2).

Chernow and ON1 teach all the above as noted under the 103(a) rejection and teach a) the system calling the user back at the telephone number provided by the user (see at least col. 2, lines 51-54), and b) relying upon a set of predetermined telephone numbers from business customers (see at least col. 7, lines 14-43) associated with purchase order numbers, but do not specifically disclose automatically transmitting the telephone number during the telephone connection. The Examiner takes the position that automatic number identification

Art Unit: 3625

(ANI) is old and well-known in the arts and is used to support a variety of system interactions with callers. Therefore it would have been obvious to one of ordinary skill in the art at time of the invention to modify the system and method of Chernow and ON1 to implement ANI as taught by ON2, in order to automatically transmit the originator telephone number during a telephone connection.

3. Claim 4 and 7 are rejected under 35 USC 103(a) as being unpatentable over Chernow (US 4,999,806) and ON1 (regarding old and well-known in the arts), as applied to claims 2 and 6, further in view of Bernard (US 5,918,213).

Chernow and ON1 teach all the above as noted under the 103(a) rejection but do not disclose text to speech. Bernard teaches a system and method of ordering products using a voice response unit to convert speech-to-text and text-to-speech (see at least Fig. 1 (100); col. 1, line 14 through col. 6, line 53). Therefore it would have been obvious to one of ordinary skill in the art at time of the invention to modify the system and method of Chernow and ON1 to implement a voice response system for callers as taught by Bernard, in order to provide text-to-speech conversion for traditional telephone shopping.

4. Claims 9, 12, and 20 are rejected under 35 USC 103(a) as being unpatentable over Chernow (US 4,999,806) in view of ON1 (regarding old and well-known in the arts), further in view of Chen (US 5,978,775).

Application/Control Number: 09/988,672

Art Unit: 3625

Chernow teaches a telephone ordering system whereby a user can order via the telephone downloadable software. The system implements a call back feature that delivers the order software upon successful reconnection with the user and the user providing a temporary password. Chernow further teaches:

- receiving a temporary password and purchasing conditions from a user
   through telephone connection: (see below)
- retrieving article information meeting the purchasing conditions received in step (a), after ending the telephone connection: software product to be purchased in retrieved after ending the call (see at least Fig. 1A (g); Fig. 1B (j, k, l).
- setting telephone connection to the user using the user's originator
   telephone number and confirming the user using the temporary password
   received in step (a): system calls the user back (see at least Fig. 1B).
- providing the article information retrieved in step (b) and arranging a
   transaction according to the user selection: delivers the ordered product (see at least Fig. 1B).

Chernow teaches all the above as noted under the 103(a) rejection and teaches a user a) calling an ordering service, b) submitting purchase order information and credit card number to the service (i.e. a number uniquely associated with the user and submitted for one-time use), and c) generating an acceptance key by the system that is transmitted to the user as a temporary password (i.e. one-time code) (see Fig. 1A (e, f)). Chernow, however, does not

Art Unit: 3625

disclose receiving a temporary password from the user. The Examiner takes the position that it is old and well-known in the arts for users of computer or telephonic technology to create their own password, personal identification number (PIN), or purchase order numbers for later use by the user and the system to verify the user's identity. The invention of Chernow generates the temporary password (i.e. acceptance key) however the user could have as easily been queried to provide a temporary password of PIN without destroying the cited reference. Therefore it would have been obvious to one of ordinary skill in the art at time of the invention to modify the system and method of Chernow to receive a temporary password from the user as taught by ON1.

Chernow and ON1 teach all the above as noted under the 103(a) rejection but do not disclose billing a purchase charge as a telephone charge. Chen teaches a system and method that allows a purchase charge to be billed to the user's telephone bill (see at least abstract; col. Fig. 1; col. 1 through 2). Therefore it would have been obvious to one of ordinary skill in the art at time of the invention to modify the system and method of Chernow and ON1, in order to provide a customer billing convenience.

5. Claims 10, 11, and 13-18 are rejected under 35 USC 103(a) as being unpatentable over Chernow (US 4,999,806), ON1 (regarding old and well-known in the arts), and Chen (US 5,978,775), as applied to claim 9, further in view of Bernard (US 5,918,213).

Application/Control Number: 09/988,672

Art Unit: 3625

Page 8

Chernow, ON1, Chen teach all the above as noted under the 103(a) rejection but do not disclose text-to-speech. Bernard teaches a system and method of ordering products using a voice response unit to convert speech-to-text and text-to-speech (see at least Fig. 1 (100); col. 1, line 14 through col. 6, line 53). Therefore it would have been obvious to one of ordinary skill in the art at time of the invention to modify the system and method of Chernow, ON1, and Chen to implement a voice response system for callers as taught by Bernard, in order to provide text-to-speech conversion for traditional telephone shopping.

#### Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure:

- Hanania, Joseph; "Securities insecurity;....." Los Angeles Times, 25
   March 1997, Proquest 11317117, 5pgs; teaches investor created
   password necessary to do business and system call back to
   customer's home number.
- Maureen, Molloy; "Technology and market drivers in the remote access marketplace," Telecommunication, July 1994, v28i7pg21,
   Proquest #35199, 5pgs; teaches one-time passwords and dial-back system.
- US 5,345,501 (Shelton) 06 September 1994; teaches ANI, PINs, and billing.
- US 6,377,927 (Loghmani et al.) 23 April 2002; teaches telephony to internet shopping.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Robert M. Pond whose telephone number is 571-272-6760. The examiner can normally be reached on 8:30AM-5:30PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Mr. Yogesh Garg can be reached on 571-272-6756. The
